25X1

1. During August 1954 increased activity has been displayed by the geologist section at SMV Headquarters in Vienna.
2. For the first time for over a year trial drillings have been resumed in various areas. Deep drilling in the area of Fischamend was negative, yielding only gas. Further deep drilling tests have been made at Aderklaa and Prottes and new shallow drillings in the Zistersdorf area, but the results of these latter are not yet known.
